

Amanda Chou

I'm a self-driven developer with 6 years of experience, passionate about continuous learning, team collaboration, and improving development efficiency.

Currently at ITSOWER for over 4 years.

Seeking a fully remote position as a Golang full-stack/backend engineer.

Taipei, Taiwan | amanda1991910@gmail.com

Education

National Central University, Taiwan

2010/09 - 2015/06

- Bachelor's in Business Administration & Finance (Double Major)

Skills

Backend / .NET

- .Extensive experience across .NET Framework → .NET 6/8, including system refactoring and legacy modernization.
- EF, EF Core, Dapper : including schema design, query optimization, and performance tuning.
- Advanced data processing with LINQ, expression trees, and high-performance pipelines.
- Solid Windows infrastructure background: IIS, Hyper-V, VMware, SSL, reverse proxy, and deployment optimization.
- NuGet package development, semantic versioning, internal registry management, and dependency governance.
- Experienced in designing shared components, internal workflows, and modular architecture.

SQL

- MSSQL, MySQL
- DB normalization, indexing, partitioning
- Complex queries, loop-based report logic

Frontend

- JavaScript, jQuery, CSS, HTML, Razor, Bootstrap
- RxJS for reactive data processing
- Grid API form integration
- Element UI, Ant Design
- Angular, Vue, Nuxt 3

DevOps / Tooling

- Git: GitHub, GitLab, Azure DevOps (Board process)
- SVN: TortoiseSVN
- Markdown documentation (README, Wiki)
- UML & project tools: Slack, Trello, MS Teams, Azure Boards, Planner, Flow

Self-Training

- Java SpringMVC
- Go (Gin framework)
- Nuxt · React
- Linux shell scripts

Work Experience

ITSOWER

2021/09 - Present • approx. 3 yrs 9 mos

Software Engineer

New Development

- CTBC External Workforce System
- Hua Nan Foreign Currency Clearing
- Shin Kong Agency System
- CarCare GO : Automotive Repair Service Platform

Maintenance / Enhancement

- Agricultural Affairs Management
- CTBC Business Referral System
- Fubon Point Exchange Platform
- Shared libraries (NuGet/template projects)
- Shared services: DPAR

Tech Contributions

- GitFlow & version control standardization
- CI/CD pipeline (Azure DevOps), NuGet automation
- .NET Framework migration to .NET 6
- Docker-based infra setup
- Agent server setup & automation
- Nuxt frontend infra setup
- Internal KM and ticket culture promotion

SYSTEX (Onsite at Chunghwa Post)

2020/06 - 2021/09 • 1 yrs 3 mos

.NET Full Stack Engineer

- Rebuilt internal management systems
- Involved in enterprise-level backend/frontend dev

Creatidea Co., Ltd.

2019/06 - 2020/06 • 1 yrs

.NET Web Developer

- Developed and maintained .NET-based gov systems
- API integration, file handling, SMS, automation
- Security scan, accessibility & performance tuning

Balvenie Technology Inc.

2018/11 - 2019/04 • 6 mos

Administrative Assistant

- General admin, cashier support, HR assistant

Deloitte Taiwan

2015/11 - 2018/05 • 2 yrs 7 mos

Tax Semi Senior

- MOEAIC investment application (China/inbound/outbound)
- Offshore company setup, shareholder/board change
- Foreign permit: Resident Visa, ARC, PRC TEEP program

Summary / Self-Intro

I am an outgoing and optimistic engineer with strong cross-team communication and collaboration skills. I care about both efficiency and quality in delivery and continuously work on improving my technical skills.

Earlier in my career, I worked on government projects and visa applications, which built my attention to detail, sense of ownership, and experience leading a small team. Then transitioned into software development through self-learning (LeetCode, online courses) and landed my first developer role within two months.

At Creatidea, I built a solid technical foundation, helped improve daily workflows, and contributed to documentation. Later, at SYSTEX, I contributed to large-scale enterprise systems and gained a deeper understanding of enterprise architecture and cross-team collaboration.

Now at ITSOWER, focus on platform and infrastructure engineering, and optimize dev workflows for work assign and task tracking, leading multiple projects and core infrastructure.

lead Git Flow and CI/CD practices, the .NET 6 migration, and Docker-based infrastructure and Nuxt infra spec.

Open Source Projects

- [RedisLab – Cache Redundancy Implementation](#)

Using .NET 9 and Docker Compose, this project demonstrates Redis Master–Replica, Sentinel, Cluster, and RedisRaft architectures, covering read–write splitting and automatic failover, while leveraging StackExchange.Redis to showcase the key differences and practical use cases of each deployment model.

- [certcenter](#)

A centralized ACME DNS-01 automation service that uses acme.sh and acme-dns to proxy TXT challenges, batch issue and renew wildcard certificates, and expose certificate health status via Go base API.

- [DbTool – SQL spec/document export tool](#)

A portable database documentation tool for **MS SQL only**. It allows exporting database specifications (as Excel files), importing column/table descriptions, and downloading `Model.cs` files to assist with development.

- <https://github.com/adaruru/DockerStack>

A curated collection of tested **Dockerfiles** and **Docker Compose** templates for streamlined development, testing, and deployment.
